

THE PACT

**You keep
the coin.
We keep
your soul.
Win-win.**

A community-made collection of 15 wanted souls.
A public founder holding cap. Creator rewards for the project.

THE COMMITMENTS

3.5%

Maximum creator holding

1

Declared creator wallet

100%

Creator rewards to project

Creator tokens are unlocked. Every creator sale will be disclosed on X within 24 hours, with its transaction.

Official contract address on page 8. Verify the exact CA at sould.me before buying. A matching token name is not proof.

Fifteen wanted souls. A community that makes the invitation.

SOuL'D is a community campaign around a collection of 15 selected crypto creators. Community members can choose a target, make an invitation and share it on X in their own voice.

The pact gives the project its character: you keep the coin; we keep your soul. The collection gives the community a shared mission and a record of its milestones.

The community experience

01 Choose a soul

Pick a KOL from the Most Wanted roster and open their invitation poster.

02 Make it yours

Create a graphic or short clip in Invitation Studio. Remix a line or make a visual reply.

03 Share the invitation

Review the X draft and decide what to publish. Sharing remains a deliberate action by the visitor.

The creative tools require no token purchase, connected wallet or wallet signature. A place on the wanted roster is an invitation target, not evidence of a partnership, endorsement or holding.

One creator wallet. A maximum holding of 3.5%.

Token	SOuL'D / Solana
Launch platform	Pump.fun; standard creator-fee model
Verified supply	1,000,000,000 tokens; 6 decimals
Creator maximum	3.5% = 35,000,000 tokens; initial buy at creation
Mayhem	Off - verified creation and bonding-curve setting
Team wallets	One creator wallet; no other team wallets

The declared creator wallet

23ynskssD9NCWnep6VoBVcVfshpCwWrjT8nT7wvjthcM

This is the sole creator/team wallet. It holds creator tokens and receives creator rewards. The 3.5% cap concerns tokens, not SOL rewards.

The 3.5% is a voluntary acquisition and holding limit, not an on-chain lock. The official mint has a verified one-billion supply and Mayhem off; the initial creator buy executed alongside creation. [5][6]

Unlocked, with sale disclosure

There is no lock or minimum holding period. We will post every creator token sale on @MerchantOfSould within 24 hours, with a link to the transaction.

Fair launch means Pump's public curve, a disclosed initial creator purchase and no separate free team allocation. The creator buy can execute before others react; transaction order and prices are not guaranteed to be equal. [3]

Planned funding: creator rewards.

SOuL'D plans to use Pump creator fees as its operating income. The project commits 100% of the creator rewards it receives to project expenses and reserves, including disclosed KOL collaborations, marketing, content, development, hosting and tools.

100% project use

Creator rewards will not fund personal distributions or a founder salary. Unspent receipts remain part of the project reserve. The budget depends on money actually received; there is no guaranteed marketing spend.

The funding path

Eligible trading	Activity on a venue that pays the applicable creator fee
Creator rewards	Collected in the relevant quote asset, such as SOL
Project budget	Disclosed partnerships, marketing, product work and operations

Pump's published fee schedule lists a 0.30% creator fee on SOL/USDC bonding-curve trades. Canonical PumpSwap pools use market-cap tiers ranging from 0.05% to 0.95%. Non-canonical pools currently pay no creator fee. Rates and rules can change. [1]

The token uses the standard creator-fee model, rather than Holder Rewards, which directs those fees to holders. Rewards depend on trading activity and platform operation and may be zero. Holding the token gives no claim on this budget, fees, dividends or revenue. [1][2]

The 3.5% token-holding limit and the creator-reward budget describe different things. The project will account for reward receipts and their use separately from movements involving the creator's token holding.

A balance is evidence. A partnership is a separate fact.

The collection milestone

The collection milestone requires a verified balance of at least 1,000,000 project tokens across owner-confirmed public wallets. The rule measures holdings, not purchases. A third-party transfer can reach the threshold; mentions or reposts do not.

Current holdings and collection history

The collection keeps each qualifying observation as a historical milestone. If that KOL sells later, the milestone stays in the history while current holdings appear separately. Failed or stale reads must remain unknown, rather than turning into a false zero or a fresh holding claim.

A balance does not prove a purchase, consent or endorsement. When a gift transfer is identified, we will label it and link its evidence without implying the entire balance was gifted. Gifted tokens still count toward the balance milestone; acquisition remains unverified otherwise.

Paid KOL collaborations

The project may pay KOLs from its creator-reward budget for agreed work. Paid collaborations will carry clear disclosure in the relevant content and in the project's reporting. A sponsored post or fee payment does not itself qualify a balance milestone. Sponsored or gifted holdings must not be presented as an organic purchase.

Where a compensated partner has a qualifying balance, the project will show the sponsorship alongside the balance or milestone. Sponsored relationships and community-led organic participation must remain distinguishable.

Community participation

Community invitations should be original and voluntary. No automated tagging, unsolicited DMs or message flooding. Creative participation does not alter holdings or create a collection milestone.

Public transactions.

A readable spending record.

The project will account for creator-reward receipts separately from personal top-ups, token trades and any other movements in the same creator wallet. A wallet address alone cannot explain why money moved; the reporting record must supply that context.

What each monthly report includes

Receipts. Reward claim date, native amount and public transaction reference.

Spending. Category, amount, purpose and transaction reference where available.

Paid partnerships. The partner, agreed work and links to sponsorship disclosures.

Reserves. Opening balance, receipts, expenses and closing project balance.

Creator holding. Token balance and percentage of the initial minted supply, checked against the disclosed cap.

Monthly reports will cover creator-reward receipts, spending, project reserves and creator holdings. Each creator sale also requires its own X post within 24 hours, linked to the transaction.

Native asset amounts are the accounting base; any USD equivalent should identify its conversion time and remain an estimate. Private identity documents and unredacted invoices do not belong in the public ledger.

Verify independently with Bubblemaps

We encourage everyone to independently review the official token on [Bubblemaps](#), using the exact CA on page 8 when a map is available. Check holder distribution, wallet clusters and the disclosed creator wallet. Review transfers in context: connections alone do not prove common ownership, and a map is not an audit or a guarantee of token safety. [4]

The website is open. The collection begins.

Created and available

The official token has been created on Pump.fun. The public website includes the 15-target roster, invitation posters, Invitation Studio and downloadable graphics/clips. SOuL Remix supports creating and downloading clips. The CA, supply and creator signature can be checked independently.

Monitoring and evidence

Six roster targets currently have project-owner-confirmed public-wallet attribution; nine remain unknown. Holding reads must still be fresh and valid. A published CA or configured provider does not establish a KOL holding, purchase or endorsement. Do not interpret unavailable data as zero.

Ongoing work

Release creative prompts, feature community work with permission and credit, report spending and record verified milestones. Hosted Remix reply links are unavailable until their separate production storage and moderation are enabled. Downloads work independently.

Risks readers should understand

The token can lose all market value. Liquidity and execution can deteriorate, and the unlocked creator holding can be sold. External services, on-chain reads or hosting can fail. Creator rewards may be insufficient or disappear; that can reduce or stop funded work.

Listing a KOL does not mean they will participate. Paid promotion does not establish independent support. The project promises no price target, investment return, exchange listing, guaranteed capture or fixed delivery date.

This paper describes project intentions and policies. It does not grant equity, profit rights or a guaranteed service funded by future trading.

The creator controls the disclosed wallet and spending decisions. There is no promised treasury lock, multisignature spending approval or token-holder governance.

Project status.

Document	Version 1.3
Launch status	Token created on Pump.fun; public website open
Official website	https://sould.me
Official X	https://x.com/MerchantOfSould
Contract address	3zRn4CSCv5yVxwGxub1qTZFA2PQJNrEX9SJKKSH8pump
Telegram	https://t.me/MerchantOfSould

Verify the official mint

The only official SOuL'D is the exact mint above, created in a transaction signed by the creator wallet on page 3. **Inspect its original creation transaction**. A token name or fee-recipient label alone is not proof. [7]

We never DM first. Verify the exact CA and official links on our website and X. A public wanted roster is not a claim that its KOLs hold the token.

An address change creates no additional 3.5% allowance. The holding limit is a creator-controlled policy, not a technical filter on incoming transfers.
